

# Ibhotwe Campus Food Ordering Platform

## Practical Lab / Development Sprint — Session Report

|         |                                    |                 |               |
|---------|------------------------------------|-----------------|---------------|
| Date    | 02 October 2026                    | Project Manager | Emmanuel      |
| Session | Practical Lab / Development Sprint | Team            | Group Vireon5 |

### 1. Executive Summary & Session Objective

Today's practical session focused on resolving two outstanding interface and session-handling bugs identified during the previous sprint's testing, and on restructuring the project's file layout. The team fixed the **footer position across all six page templates**, resolved the **student logout ("ReferenceError: handleLogout is not defined")** issue affecting logged-in students on non-login pages, and reorganized the codebase into clearly separated **frontend/**, **backend/**, and **database/** directories. All seven group members were present for this session.

### 2. Individual Member Attendance & Task Contributions

| Team Member | Assigned Role      | Attendance & Tasks Completed                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Emmanuel    | Project Manager    | <ul style="list-style-type: none"><li>● <b>Present</b></li><li>• Coordinated the bug-fix sprint and reviewed all changes before merging.</li><li>• Oversaw the restructuring of the repository into frontend/, backend/, and database/ folders.</li><li>• Managed GitHub branches, commits, and PRs for today's fixes.</li></ul>                                                                                                                          |
| Khulukani   | Frontend Developer | <ul style="list-style-type: none"><li>● <b>Present</b></li><li>• Moved the &lt;footer id="footer"&gt; tag to the bottom of the document, after the page content container, across all 6 HTML templates (home, browse, cart, orders, vendor, game).</li><li>• Updated styles.css with a flex-based sticky-footer layout (body: flex column, min-height: 100vh; .page.active: flex: 1) so the footer sits correctly on both short and long pages.</li></ul> |
| Pako        | UI/UX Designer     | <ul style="list-style-type: none"><li>● <b>Present</b></li><li>• Visually verified footer placement and spacing across all 6 pages after the fix.</li><li>• Checked layout consistency on short-content and long-scrolling screens.</li></ul>                                                                                                                                                                                                             |
| Nondumiso   | Backend Developer  | <ul style="list-style-type: none"><li>● <b>Present</b></li><li>• Verified the POST /api/auth/logout endpoint behaviour against the updated frontend logout flow.</li><li>• Helped separate backend routes and models into the new backend/ folder structure.</li></ul>                                                                                                                                                                                    |

| Team Member | Assigned Role          | Attendance & Tasks Completed                                                                                                                                                                                                                                                                           |
|-------------|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Tumelo      | Backend Developer      | <p>● <b>Present</b></p> <ul style="list-style-type: none"> <li>Assisted with migrating database models and seed scripts into the new database/ folder.</li> <li>Re-tested API endpoints after the folder reorganization to confirm nothing broke.</li> </ul>                                           |
| Anelisa     | Tester & Documentation | <p>● <b>Present</b></p> <ul style="list-style-type: none"> <li>Tested the logout flow end-to-end on home.html, browse.html, and orders.html to confirm the ReferenceError no longer occurs.</li> <li>Documented both bug fixes (footer position and logout) for today's report.</li> </ul>             |
| Onkarabetse | Tester & Documentation | <p>● <b>Present</b></p> <ul style="list-style-type: none"> <li>Tested the new mobile drawer "Sign Out" button and confirmed session cookie, localStorage, and sessionStorage are cleared correctly on logout.</li> <li>Verified redirect to login.html after logout across different pages.</li> </ul> |

### 3. Key Deliverables & Bug Fixes Completed Today

#### 1 Fixed Footer Position (Moved from Top to Bottom)

**Cause:** In all HTML page templates (home.html, browse.html, cart.html, orders.html, vendor.html, game.html), the `<footer id="footer">` tag was placed directly after `<nav id="navbar">`, before the main `<div id="{page}-page">` content container.

**Fix:**

- Moved `<footer id="footer">` to the bottom of the document, after `<div id="{page}-page">`, across all 6 pages.
- Updated styles.css so body uses `display: flex; flex-direction: column; min-height: 100vh;` and `.page.active` has `flex: 1;` — this makes the footer stick naturally to the bottom on both short screens and long scrolling pages.

#### 2 Fixed Student Logout / Sign Out

**Cause:** `handleLogout()` was previously defined only inside login.js. When logged in as a student on home.html (or browse.html, orders.html, etc.), login.js was not loaded, causing `onclick="handleLogout()"` to throw `ReferenceError: handleLogout is not defined`.

**Fix:**

- Added `handleLogout()` to nav.js, which is loaded on every page across the platform.
- Clears the server session cookie via `POST /api/auth/logout`, wipes `localStorage` and `sessionStorage`, and securely redirects back to login.html.
- Added a "Sign Out" button to the mobile drawer menu for mobile users.

### 4. Project Restructuring

The project has now been separated into distinct `frontend/`, `backend/`, and `database/` folders to keep everything clean, organized, and free of clutter.

```
wsu-ibhotwe-food-ordering/
|-- frontend/  HTML, CSS, JS, static assets
```

```
| -- backend/ FastAPI app, routes, models  
`-- database/ SQLAlchemy schema & seed data
```

## 5. Next Steps for Upcoming Session

- Integrate JWT token authentication between the frontend login form and backend endpoints.
- Finalize the Vendor Management Dashboard and real-time order tracking status updates.
- Prepare system UML diagrams (ERD, Use Case, Sequence) for submission.
